PSYCHOLOGICAL ASSESSMENTS for Pilots acc. EASA CAT.GEN.MPA.175(b)

About Us

We are a young team of aviation psychologists and mental health specialists who are rethinking aviation assessment. We use the latest technology to design practical assessments that are customer-oriented, have a lasting effect and are optimally tailored to today's requirements.

Our Mission

Since February 2021, EASA has required the psychological assessment of pilots as part of CAT.GEN.MPA.175.

The aim is to increase safety and efficiency.

Our assessments examine:

- Cognitive abilities
- Personality
- Professional skills
- Social skills

With our expertise, we support you in meeting these requirements and ensuring sustainable success.

Cost Efficiency

- Save costs in the long term. Targeted psychological assessments help you to reduce the risk of costly bad hires, minimize downtime and boost the performance of your crew.
- Attractive, cost-effective pricing

Customized assessment

- Our goal is to not only check pilots on a technical level, but also to strengthen them on a personal level. Because a healthy mind ensures safe and stable performance – for the pilot, the crew and the PAX.

Health and well-being

- Our goal is to not only check pilots on a technical level, but also to strengthen them on a personal level. Because a healthy mind ensures safe and stable performance

Reputation Enhancement

- Strengthening the safety culture in the company
- Improving internal and external perception through qualified and practical auditors
- Professional development of pilots in the company is visibly promoted

Efficient use of time

- Assessment is conducted online,
- saving the company and the employee time.
